

Testimonials

"This product is a great accessory as part of a complete roofing system. When vent pipes need to be extended to accommodate additional layers of insulation, or meet building codes, we can now offer our contractors the ability to order the extensions directly from us when they order all their other materials."

-Steve Ruth, Duro-Last Vice President of Marketing and Sales

"Tubos is an excellent product that we use on many of our reroof projects. Whether we are increasing insulation thickness to meet additional R-value requirements, adding tapered insulation or pouring a new lightweight insulating concrete deck, there is always a need to raise the height of existing vent pipes. Tubos is a quick, easy and inexpensive way to raise vent pipes that will not leak and meets roof consultant and the membrane manufacturer's requirements. Thank you for providing this great solution."

Brent McFarlin - KPost Company, Vice President of Operations

"Your product is amazing, we have been using it for some time, I wish I had thought of it! We do a lot of tapered insulation installations which almost always requires that the vent pipes be extended to a higher elevation to accommodate the taper and this is a lot easier, less expensive and faster than the old method of a PVC coupling which usually also required the use of a larger lead stack. The roofing consultants we have interacted with on projects that required extension of the vent stack also approved it quickly as they also see it as a way to save their clients money and still maintain a high quality detail. Good Job!"

- Darrick Gockerell - PSI Roofing & Restorations, President

"Tubos has invented an indispensable product that fills a huge void in the roofing industry. We like the product so much that it has become a permanent line item in our project specifications. Congrats on the idea and we wish you every success with your business."

- Robert Whitcomb, AIA, RRC, Forensic Architect, Roofing & Waterproofing Consultant

"Tubos, are you kidding me? Every commercial and/or residential re-roof contractor has run into a sub-eight inch VTR scenario, broken or as is. Before Tubos you had to enlist the plumber or get creative with an exterior sleeve, not ideal. These are great to stock in your Service vans. Foremen hoard them behind the bench seat in their truck. You cannot do a re-roof or a recover without them. Thank you Tubos, you have created a must-have for us."

- Geoffrey Hagan, LEED AP Environmental Solutions Manager at Tecta America Central Florida

"McMullen Roofing is a commercial roofing contractor serving west central Florida since 1985 and we have worked with the Tubos team since their inception. The Tubos product has made a tremendous impact on our roofing projects by saving us labor and providing a unique solution to a common problem. We have received excellent support and customer service from Tubos and we highly recommend this product!"

- Adam L. Smith, Estimator McMullen Roofing, Clearwater FL

"I rarely give personal recommendations, as they always come back to haunt me. But Mr. Morris is an exceptionally trustworthy and knowledgeable person, who is deeply committed to his client's needs. In addition,

Tubos has tackled a longstanding issue of plumbing vent pipe extension. This would be absolutely perfect for anyone increasing insulation thickness, or LWIC pour. My highest recommendation to Kevin and Tubos."

- Robert R. Solomon CCC1325620 Director, Public Sector Services, White Mountain, LLC

"The first time we used Tubos my guys said it sure is a lot easier and quicker than those rubber couplings. What a great idea!"

- JC, Silver Systems Incorporated

"I purchased Tubos and had my roofers use it on my home. I do not want to worry about any leaks at the soil stack and with the 6" insert on Tubos I know that it is virtually impossible to leak or to be installed wrong. When I gave it to my roofer I believe I also got them a new customer as well, he was impressed with the simplicity and ease of installation. Thanks again!"

- Tom Farrell, Homeowner - Norwood, MA.

"As a Distributor, it is not often I see a new product come along which draws such excitement and practical use for the contractor as Tubos. Its best testimony is that every contractor to date that has purchased this product from me, has been a return Tubos buyer. Congratulations on your innovation. I highly recommend this product."

- Jim Coston Sr., Owner - Phoenix Sales

"Time is money, and the Tubos product make re-roofing and working with tapered systems a snap. Instead of running all over town looking for the right flashings- you just order the diameters you need, and custom cut on the job. It does not get any easier than that."

- Paul Graham, V P Sales, MGM Sales LLC and Moore Graham Sales, Inc.

"Tubos, what's a Tubos? That is what I said when I first heard the name of this product. Talk about being pleasantly surprised. In discussions with numerous contractors they were impressed with the design of the product, ease of application and an answer to their needs. The product fits that void of what do we use to extend this broken pipe and meet the requirements on the roof. TUBOS!"

- Albert Spingler, Sales Rep JGA Beacon

"I have found Tubos to be a well designed product that saves time and money in the field for re-roof projects, as well as maintenance and repairs. Nu- Tec Roofing Contractors will be using this product for all our future projects and repair needs. Thank you Tubos, for such a great product."

- Charlie Stapleton, Nu-Tec Roofing Contractors

"Tubos vent pipe extensions are an incredible time saver for re-roofing and service crews. Regardless of roof type, Tubos are the best pipe extensions a roofing contractor can install. The fact that the extension has the same exterior diameter as the existing pipe is extremely beneficial when using liquid applied flashings. Stocking a few cases of each Tubos size is a quick and easy way to ensure faulty pipe extensions don't come back to haunt you. For anyone that is skeptical, I strongly recommend trying them- you wont be disappointed."

- Brandon Adreon, Director of Commercial Operations, Chinook Building Envelope Services

"Great to see the innovation in the roofing industry. This seems like a perfect solution for reroofing projects that need to increase insulation to comply with energy code requirements."

Justin Koscher, President- Polyisocyanurate Insulation Manufacturers Association
